## Work Experience

### Software Engineer @ Volvo Cars – May 2022 - Present

Member of the team responsible for developing event-driven systems and tooling around subscriptions and billing. Day-to-day work revolves around designing, developing and testing of services, as well as collaborating with stakeholders and interviewing potential candidates.

**Working with Java w/ Spring Boot, Kafka, PostgreSQL, GraphQL, Elasticsearch and more...**

### System Developer @ Subtonomy – April 2017 - May 2022

Worked as a full-stack developer with tasks ranging from building and maintaining back-end realtime-critical distributed systems capable of processing up to hundreds of gigabytes of data each day using Spark and Kafka. Ops work consisted of maintenance, monitoring of multiple high-availability production servers, handling bug reports and customer feature requests.

**Worked with Java, Scala, Spark, Kafka, SQL, shell scripting**
